

# Online Book Store Database Design Review

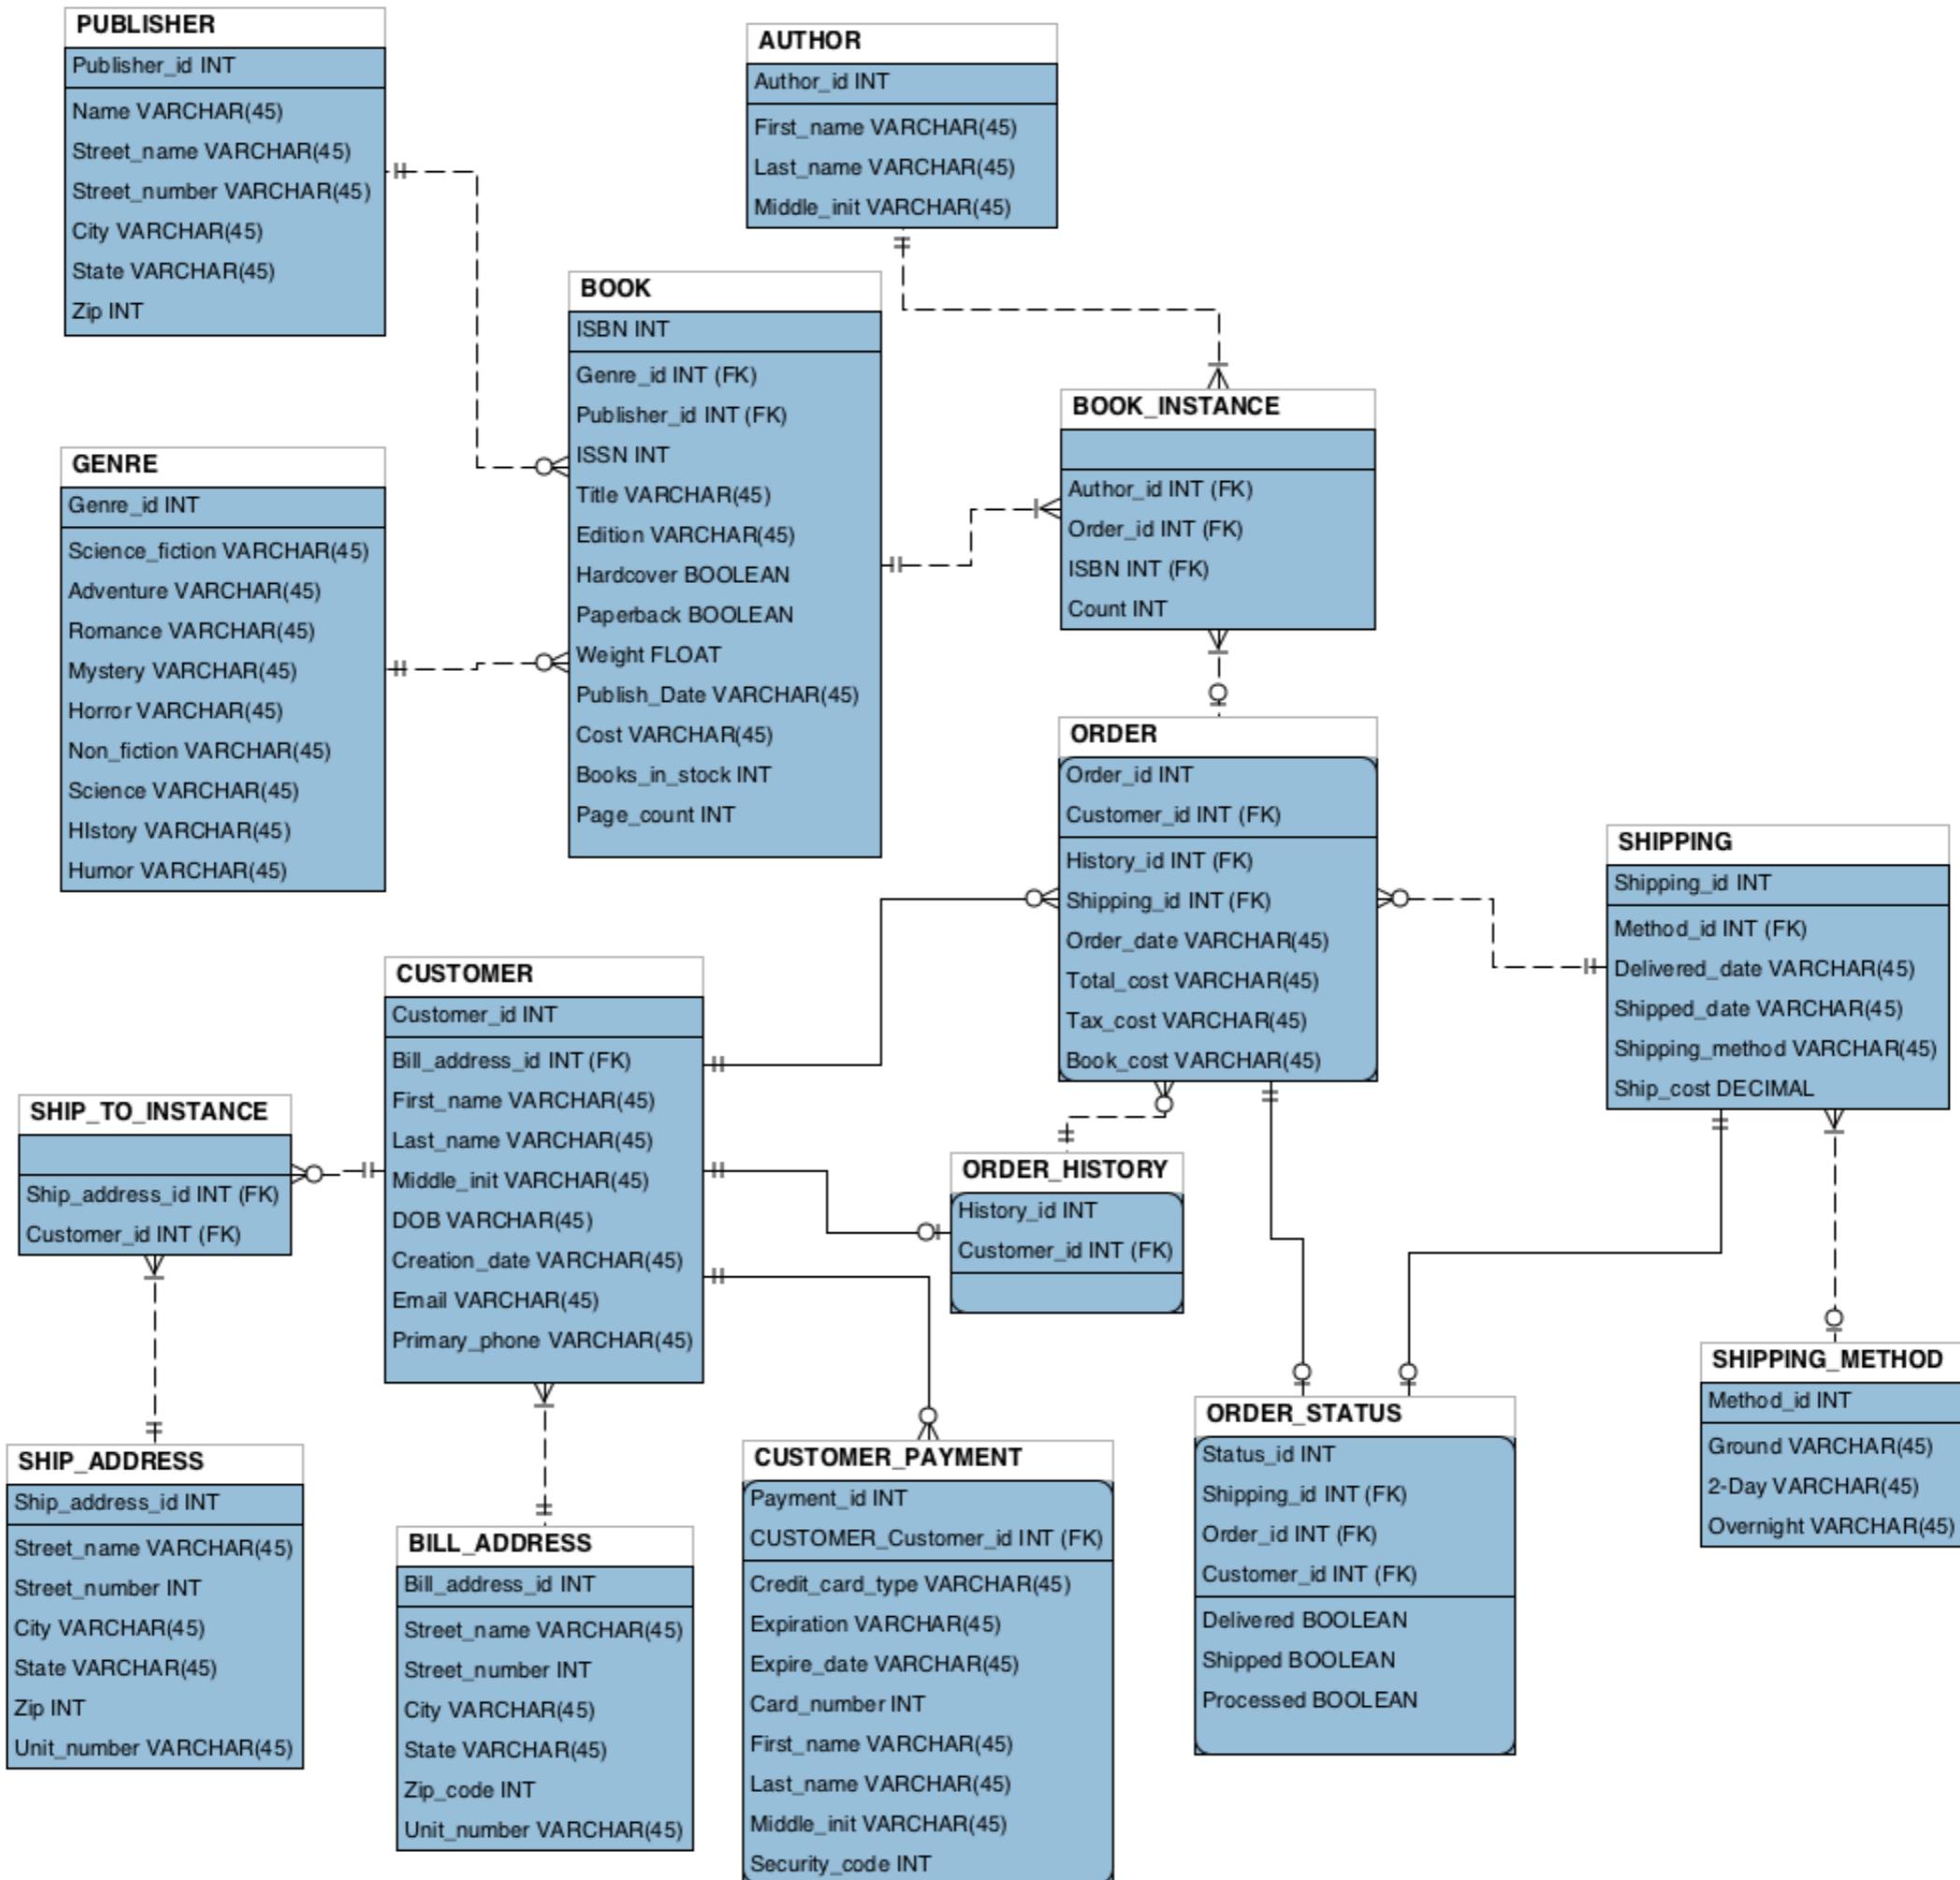

Jonathan Thompson

# Project Description

- Implement a basic database for an online bookstore
- Have basic design and functionality that supports business needs
- Allow for end-user interaction for easy purchasing and order tracking

# General Description

- Store customer information
  - Shipping Information
  - Billing Information
  - Order History
- Store books available for purchase
  - Genre
  - Author
  - Publisher

# Proposed Functionality

- Select all books of a certain genre
- List all books with zero stock
- Find all orders that have not been shipped
- View all books of a certain genre in a user's order history

# Questions and Suggestions
